Secured, Personalized Online
Access to Enterprise Resources

A Web Portal Solution using TIBCO and Entrust[®] Products

Today's business environment requires efficient online services that can help to accelerate business processes, increase business agility and reduce overhead for an organization. Personalized access to content, applications and data needs to be readily available to employees, citizens, partners and customers in a secured and simple manner. This can be achieved through a web portal solution built with proven technologies from TIBCO Software Inc. and Entrust, Inc. TIBCO PortalBuilder, a key component of TIBCO's ActivePortal, and Entrust GetAccess[™] software together can help to deliver personalized online access to enterprise resources, with single sign-on capabilities and high -performance, in a comprehensive web portal solution.

What is a Web Portal?

Web portals create a single doorway allowing employees, customers, citizens and partners online access to an organization's content, data and services. By offering a web portal, an organization can provide personalized access to the information and resources required to service varied business communities, while increasing convenience and ease of use by integrating many applications across diverse environments.

Together, Entrust, Inc. and TIBCO Software Inc. products can be used to deliver a web portal solution for today's organizations. By building a web portal using TIBCO software and Entrust Inc.'s enhanced security, that offers security and, single sign-on access, organizations can provide more efficient access to information and services over the Internet in a secured and straightforward manner.

Entrust GetAccess[™] Software

Entrust, Inc. a leading provider of enhanced security solutions, delivers a single entry and access point to achieve enhanced user identification, entitlements and single sign-on access across Web portal applications through Entrust GetAccess software. Supporting a broad range of authentication methods and user devices, Entrust GetAccess software makes it possible for organizations to enable single sign-on access to the personalized services, content and data that meet the diverse needs of a varied user community. As the foundation of the Entrust Secure Web Portal solution, Entrust GetAccess software allows an organization to identify whom a user is doing business with through their online Enterprise portal, providing organizations with the security, flexibility and performance to allow them to personalize the user experience. Entrust GetAccess software can be further extended across an organization to offer single sign-on access, identification and entitlement capabilities across a wide range of other applications throughout the enterprise.

TIBCO

ActivePortal™

TIBCO, the leading global provider of business integration solutions, delivers ActivePortal, a next generation portal platform for integrating business users with all aspects of the enterprise. With ActivePortal, business processes are integrated to the user desktop, users can manage business processes by exception, and users can access critical business information in a personalized, integrated, real-time fashion. TIBCO PortalBuilder, a key component of TIBCO's ActivePortal, offers a platform that enables companies to deploy interactive business services with a single, consistent, and personalized view to underlying corporate data and systems. PortalBuilder allows enterprises to leverage their integrated application network and B2B infrastructure to provide an integrated, personalized set of real-time content and interactive services to their portal audience. As a result, customers, vendors, partners and employees throughout the entire business community have up-to-date access to business information and services.

A Secure

Web Portal Solution from Entrust and TIBCO

TIBCO ActivePortal and Entrust GetAccess software have been tested for interoperability to provide a robust secured portal solution suitable for small and large-scale deployments. Together, Entrust, Inc. and TIBCO Software Inc. deliver a solution for organizations to provide security for personalized content and services through a single entry point allowing authorized employees, partners and customers access to content across multiple applications and resources. This solution provides a means for an organization to create a web portal that delivers single online access to the multiple resources in an organization while helping to reduce overhead.

Using the TIBCO PortalBuilder to provide an integrated, personalized set of real-time content and interactive services combined with the Entrust GetAccess software solution offers the identification of portal users and ease of use in accessing resources, through single sign-on access. Single Sign-on access can help enhance overall security by automating access to authorized web services and enterprise-wide applications through a single login. Entrust GetAccess software is designed to deliver a single entry and access point for users across multiple applications and resources. The consolidation of user entry points can help in reducing the administration of user identities, and can allow administrators to manage one user identity across all portal resources. This can add convenience for users and further enhance their online experience. Entrust GetAccess software is designed to support a broad range of authentication methods, varying in strength to meet the needs of a diverse user community, from LDAP (Passwords in external directories), smart cards, tokens, biometrics or digital ID's.

In addition, Entrust GetAccess software can be extended to have identification mapped to back-end applications, enabling an organization to control access to multiple resources based on company policies and user profiles. By further extending Entrust GetAccess software across a wide range of enterprise applications, an organization can leverage their investment to provide single sign-on, identification and entitlement capabilities across a diverse range of enterprise resources. Both Entrust, Inc. and TIBCO can deliver the needs of today and tomorrow, as both wired and wireless devices including WAP, PDAs and more are supported. Both products have been proven to deliver scalable, high-performance systems offering an extensible solution that can grow as an organization's application requirements change.

Deliver Business

Efficiency and Convenience

Deliver a web portal with proven technologies from Entrust, Inc. and TIBCO Software Inc., providing single access to resources that can help to accelerate business processes and increase business agility to enhance customer's, citizen's, partner's and employee's online experiences. By delivering a web portal with varied business audiences in mind, an organization can deliver efficient access to resources and provide convenience to both the end user and the organization. By building a web portal using TIBCO ActivePortal software, combined with the security and single sign on capabilities of Entrust GetAccess software, an organization can offer business efficiency through online services that can help to enhance user productivity and accelerate business processes throughout an organization.
