Enhance Security, Increase Usability
Entrust IdentityGuard smartcards and devices integrate seamlessly into the software authentication platform and either Entrust Authority Certification Authority or Microsoft Certification Authority. Utilize the most advanced smartcard technology to reduce the number of authenticators while increasing security, functionality and usability.

Maximize Security, Minimize Cost
The Entrust IdentityGuard platform, which offers one of the widest ranges of authenticators on the market, allows organizations to issue the right authenticator for the situation, which may not always be a smartcard — maximizing security while minimizing cost.

Faster, More Secure
By using the latest chip technology, Entrust smartcards operate up to two times faster than the competition, while incorporating the latest hardware resistant to attacks attempting to steal identities. Entrust’s multipurpose smartcards help organizations realize true physical and logical access convergence.

Know the Specs
To really understand the high performance of Entrust smartcards, ask about Entrust’s smartcard technical specification guide. Also available via the link below, it’s an easy-to-use reference that demonstrates the smartcard’s cryptographic performance, PIV compliance, advanced capabilities and more.

Secure Biometric Storage

Entrust IdentityGuard enables you to capture and store sensitive biometric data on smartcards via a secure, tamper-proof method. Biometric data cannot be copied or modified without detection. The sensitive information cannot be released unless the cardholder provides a PIN or the card is read by a trusted card reader.

This unique ability, available via Entrust’s FIPS 201-compliant solution, enables organizations to implement a policy that requires the use of advanced biometric authentication (e.g., fingerprint scan to open a door or to reset a blocked PIN).

Extend this technology to fight fraud in unlimited ways, including authenticating cardholders before they vote, receive medical attention or even purchase prescription medication at pharmacies.

Based on Java Card Platform

Entrust smartcards and USB tokens are based on the open Java Card Platform. It’s designed to allow for the addition of third-party applications — even after initial smartcard issuance.

Java Card technology is one of the most versatile, interoperable platforms for smartcards and secure USB tokens available. Some vendors use proprietary, in-house smartcard operating systems, which makes it difficult to buy off-the-shelf applications from trusted third-party security vendors.

This hinders advancement of the security environment and locks organizations into specific vendor hardware or software. Java Card’s open approach ensures efficient upgrades are not only possible, but straightforward.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Benefit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mixed deployment flexibility with secure smartcard and/or USB formats.</td>
<td>Employees have the freedom to use the form factor that best improves their effectiveness, without sacrificing an organization’s ability to administer.</td>
</tr>
<tr>
<td>Dual-interface smartcards interoperable with both contact (ISO 7816) and contactless (ISO 14443) interfaces.</td>
<td>Make the investment once, then evolve where the smartcard is utilized over time. The contact interface works with low-cost desktop readers. Select the contactless interface for fast, secure facility access, or authentication and signing with NFC-enabled tablets.</td>
</tr>
<tr>
<td>Simultaneous legacy and modern PACs support for streamlined migration; issue and manage from a single Entrust IdentityGuard platform.</td>
<td>Reduce cost by improving security only where required. No need for complex, costly overnight replacements for physical access system. Avoid additional cost of two management systems.</td>
</tr>
<tr>
<td>Certificates seamlessly issued by Entrust IdentityGuard during smartcard issuance.</td>
<td>Meet PIV-I or PIV-C requirements from Entrust IdentityGuard Cloud Services PKI. Issue fully personalized smartcards with no need to involve the employee, citizen or consumer with complexities of certificate issuance or renewal.</td>
</tr>
<tr>
<td>Can be used with Entrust or Microsoft CA with very little user intervention.</td>
<td>Customer no longer needs to perform the expensive, time-consuming role of system integrator.</td>
</tr>
</tbody>
</table>

Entrust offers software authentication platforms that strengthen security in a wide range of identity and transaction ecosystems. Government agencies, financial institutions and other enterprises rely on Entrust solutions to strengthen trust and reduce complexity for consumers, citizens and employees.

Now, as part of Datacard Group, Entrust offers an expanded portfolio of solutions across more than 150 countries. Together, Datacard Group and Entrust issue more than 10 million secure identities every day, manage billions of secure transactions annually and issue a majority of the world’s financial cards. For more information about Entrust solutions, call 888-690-2424, email entrust@entrust.com or visit www.entrust.com.
