

**ENTRUST**

# Entrust Adaptive Issuance™ Visitor Management as a Service

## A Closer Look at Multi-Location Applications

### HIGHLIGHTS

#### Increase security and reduce operational costs

- **Efficient:** Up to 12 different categories for recurring visitors streamlines the check-in process
- **Secure:** Private, dedicated environment with the highest level of data security
- **Cost-effective:**
  - ID scanning included at no extra charge
  - Priced per location, not per kiosk

### KEY FEATURES & BENEFITS

#### Single solution, multiple locations

Whether your facilities are scattered locally or internationally, you want a single visitor management solution able to meet the demands of every location you're monitoring.

Choosing a single solution to use companywide helps you:

- Reduce training costs, because there's no need to learn multiple systems

- Reduce the burden on local staff and corporate resources
- Increase security and reduce operational costs
- Stay uniform with centralized reporting
- Standardize visitor policies
- Run real-time reports from a global dashboard

#### Low risk, high reward

Most adoption strategies are associated with varying levels of risk and costs, as well as a bit of trepidation about switching to a new system.

But switching from a paper log book to an Entrust visitor management system is easy and affordable.

Our team can assist with onboarding and training to set you up for success. Plus, the software runs on an annual subscription – priced per location, not per kiosk – to keep the costs down for you. Some of our competitors charge per kiosk, so if you've got three entry points for one building, you could be paying three times the amount for a single location. That can add up quickly if multiple locations need numerous kiosks.

# Adaptive Issuance Visitor Management as a Service: Multi-Location VMaaS

## 4 easy steps to set up the Entrust multi-location VMaaS

### 1. Add Users

Create a list of employees that will be using the system

### 2. Add Branding

Add your logo to support your brand

### 3. Create Workflows

Define visitor workflows, custom questions, NDAs

### 4. Set Up Kiosk

Sync iPad to software and set up printers

## Standardized accessories for an integrated solution

The VMaaS solution supports a kiosk application for contactless check-in of visitors. This check-in application runs on a standard iPad that can be secured in a floor standing kiosk or desk mounted kiosk stand. The check-in application also allows for organizations to seamlessly print visitor badges on a range of label printers.

## SYSTEM REQUIREMENTS

### Browser

It is strongly recommended you use a Google Chrome browser to improve your VMaaS solution experience. The Chrome browser supports TLS 1.2.

### Kiosks

The kiosk application currently supports English, German, Portuguese & Spanish. Support for Mandarin, Japanese, Korean Hindi, French, Italian, Swedish, Finnish and Czech in the kiosk application will be available shortly

The VMaaS solution supports all 9.7" iPads that are capable of running the latest supported version of iOS as well as the iPad 10.2" - 7th generation.

The Kiosk app will always support the two latest IOS versions.

### Printers

- Brother QL-710W
- Brother QL-720NW
- Brother QL-820NWB

### Badge Label Stock

- DK-2205 (62mm) Continuous Roll
- DK-1234 (60mm x 86mm) Roll
- DK-1202 (62mm x 100mm) Roll

Make sure you are not using a sample roll of label paper. DK-2205S or any paper type that ends with "S" (for sample) will not output.
