Entrust DataControl
Data encryption, multi-cloud key management, and workload security

HIGHLIGHTS
• Complete workload lifecycle encryption management
• Enterprise Key Management Server (KMS)
• Strong and granular virtual machine (VM) encryption: live boot (OS) and data partition encryption
• Access controls for separation of duties among administrators
• Seamless integration with Entrust nShield® HSMs for FIPS 140-2 Level 3 certified root of trust

Managing encrypted workloads can get complex, especially in a multi-cloud environment
Workloads go through many lifecycles, from staging to deployment to backup and eventual decommissioning. Each stage poses different risks of potential data theft or other misuse.

Workload encryption is not a deploy once and forget operation
It is critical to frequently rotate data encryption keys. Managing workload encryption from each cloud vendor’s platform is complex and increases the risk of inconsistent policies and human mistakes. Built-in key management policy reduces complexity and ensures consistency.

Entrust DataControl (formerly HyTrust) secures multi-cloud workloads throughout their lifecycle and reduces the complexity of protecting workloads across multiple cloud platforms. This provides greater protection of your organization’s critical and sensitive information while enabling compliance with data privacy regulations.
Deployment platform support
- CentOS
- Red Hat Enterprise Linux
- Ubuntu
- SUSE Linux Enterprise Server
- AWS Linux
- Windows Server Core 2012 R2, 2016, and 2019
- Windows 8.1 and 10

Deployment media
- ISO
- OVA (Open Virtual Appliance)
- Amazon Machine Image (AMI) available via Amazon marketplace
- Virtual Hard Disk (VHD) available via Microsoft Azure marketplace
**KEY FEATURES & BENEFITS**

**Managing encrypted workloads in a multi-cloud infrastructure**

DataControl allows you to manage your encrypted workloads across different infrastructures, including on-premises and with the leading public cloud platforms. With DataControl, you get a centralized and scalable solution to control all your encryption keys. DataControl includes the Enturst VMware-certified Key Management Server (KMS) KeyControl.

**Deep workload protection**

DataControl provides granular encryption for better security. The protection boundary does not stop at the hypervisor or at the data store; VMs are individually encrypted. Inside the VM, unique keys can be assigned to encrypt each partition, including the boot (OS) disk and swap partitions.

**Easy to deploy and manage**

DataControl provides deployment flexibility with a single interface for all workload encryption, which eliminates the complexity of using each platform’s own encryption feature separately.

- Superior user experience
- Zero downtime encryption
- High-availability clustering ensures disaster recovery capabilities

**Access controls**

DataControl allows for robust policy-based access controls to enforce separation of duties across different user personas. Prevent root users or system administrators from accessing sensitive data by enforcing access controls on encrypted volumes.

---

**Deduplication support**

Previously, the concern existed that encryption and deduplication could not co-exist, given that encrypting data makes every block different. DataControl’s unique approach offers AES 256-bit encryption while maintaining 91% of storage deduplication benefit.

**Platform support**

- **Private cloud platforms:**
  - vSphere
  - OVHCloud
  - VxRail
  - Pivot3
  - NetApp
  - Nutanix

- **Public cloud platforms:**
  - Amazon Web Services (AWS)
  - IBM Cloud
  - Microsoft Azure
  - VMware Cloud (VMC) on AWS
  - Google Cloud Platform (GCP)

- **Hypervisor support:**
  - ESXi
  - AWS
  - Azure
  - KVM
  - GCP
Entrust DataControl

Technical specifications

- Encrypt boot (OS), swap, and data partitions
- Support for encrypting Windows GPT boot drives, including UEFI Secure Boot drives
- Individual keys per partition
- Strong AES (128/256 bit) encryption with Intel hardware acceleration support
- FIPS 140-2 compliant Level 1 encryption key management. Seamless integration with Entrust nShield FIPS 140-2 Level 3 hardware security modules
- Zero downtime encryption with automatic re-keying
- Dynamic partition resizing for Windows VMs
- High availability (HA) support with active-active cluster (up to 8 KMS servers per cluster)
- Single encryption key for deduplication support
- Certified for VMware vSphere and vSAN encryption
- REST-based API integration for DevOps
- Protect encrypted workloads against unauthorized access with boot and clone protection

DataControl is part of a suite of data encryption, multi-cloud key management, and virtual machine and containerized workload security policy compliance products. See table below for details.

<table>
<thead>
<tr>
<th>ENTRUST PRODUCT</th>
<th>DESCRIPTION</th>
<th>ADDITIONAL INFORMATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>KeyControl BYOK</td>
<td>For generating and bringing your own cryptographic keys to AWS, Microsoft Azure, or Google Cloud Platform</td>
<td>Licensed standalone or can be deployed with KeyControl and/or DataControl</td>
</tr>
<tr>
<td>KeyControl</td>
<td>Enterprise encryption key management for KMIP enabled workloads</td>
<td>Licensed standalone or can be deployed with KeyControl BYOK and/or DataControl</td>
</tr>
<tr>
<td>DataControl</td>
<td>For fine-grained, agents based control and encryption key management of virtual machine encryption in multi-cloud environments</td>
<td>Licensed standalone or can be deployed with KeyControl and/or KeyControl BYOK</td>
</tr>
<tr>
<td>CloudControl</td>
<td>For automated workload security policy enforcement and compliance in virtualized and containerized environments protecting sensitive data against misconfigurations in the cloud.</td>
<td></td>
