Entrust and Venafi

Automate full lifecycle management of TLS/SSL certificates from multiple CAs through a single platform

Entrust integrates seamlessly with the Venafi Trust Protection Platform

Organizations that use Venafi as a centralized certificate management platform to help automate processes appreciate the seamless integration of Entrust and Venafi. Our partnership enables us to offer industry-leading digital certificates that support out-of-the-box integration with Venafi’s tools and applications, empowering any organization using Venafi as their front-end certificate management solution for machine identities.

The solution

Machine identities – keys, secrets and certificates – must be properly managed enterprise-wide in order to avoid costly process or system outages. The biggest barrier to efficient machine identity management: decentralized control of TLS/SSL certificates. Machine identity management platforms such as Venafi make it possible to automate the certificate lifecycle across multiple certificate authorities (CAs), auto-install across multiple endpoints, and provide end-to-end management. If you are using Venafi to help solve this problem, the next step is partnering with a reliable, reputable certification authority (CA) that offers not only a service that you can integrate with, but also a wide range of certificate types to suit any use case.

Venafi has fully integrated Entrust TLS/SSL certificates into the platform for quick, easy setup and full lifecycle management – while supporting all Entrust TLS/SSL certificates and our flexible business models and licensing policies.

Experience that matters

Entrust has been onboarding Venafi customers to our platform for more than a decade. Our tried and tested APIs were built specifically to support Venafi and have been advancing along with the evolution of our products and the certificate industry. With many large organizations using the combined Entrust and Venafi solution, Entrust is a proven leader when it comes to supporting this integration.

HOW IT WORKS

**Integration as simple as 1-2-3**

Setting up your Venafi instance with Entrust Certificates Services is easy. Simply create a secure API credential, configure Venafi to these credentials and point to Entrust as the certificate source. Now you are ready to start customizing your certificate issuance and management process.

**Use it to support:**

- Creating new certificates
- Adding new domains
- Renewing existing certificates
- Revoking certificates
- Reissuing and updating existing certificates and associated metadata
- Reporting
- Expiry notifications

THE ENTRUST DIFFERENCE

**Entrust advantages**

**Subscription plan – reusable certificates for changing web environments**

Our unique subscription plan gives customers the opportunity to reuse TLS/SSL certificate licenses, providing a cost-effective way to plan and budget TLS/SSL certificate inventory.

**Additional advantages:**

- Award-winning technical support
- One-to-one customer relationships
- Unlimited reissues
- Unlimited server licensing
- Proven browser trust
- Best practices
- Instant Issuance on pre-approved domains

By exploring the combined Entrust and Venafi solution, you will find that the two products complement each other for a solution that is unmatched.
