

Mobile Innovations Locks Down Mobile Data Security With Release of MPA Two Factor Authentication at 111th CACP Conference

OTTAWA, CANADA, August 15, 2016 (Newswire.com) - Mobile Innovations CTO Ian Bowles today announced his company's release of their new 2-factor authentication solution to secure mobile data access on iOS, Android and BlackBerry devices using PKI Certificate technology.

Two Factor Authentication blocks all access to the device unless two of three factors are provided; something you have, something you know, or something you are. Canadian Law Enforcement requires that any records or Police data can only be accessed if it is protected with 2-Factor authentication. Filling a void left with the demise of BlackBerry's 2-Factor solution some years ago, Mobile Innovations is now the only Canadian firm able to offer hand held mobile data securely in compliance with these Canadian Law Enforcement requirements.

Mobile Innovations' 2-Factor solution gives users a choice of using 2 industry-leading PKI technology solutions providers – Entrust Datacard and Gemalto.

As an Entrust Datacard Technology Alliance Partner, Mobile Innovations has integrated with Entrust Datacard's FIPS 201 compliant Smartcards, using both contact and NFC interfaces on smartphones and desktops. Mobile Innovations has also leveraged Entrust Datacard's NIST SP800-157 compliant derived credential capabilities certificates on iOS, Android and BlackBerry 10 which provides frictionless smartphone security.

Working closely with Gemalto, Mobile Innovations is leveraging this mobile security innovator's SafeNet mobile authentication suite as well as their SafeNet MobilePKI Bluetooth Smart solution. SafeNet MobilePKI enables PKI security on mobile devices using secure Bluetooth Smart enabled readers and the IDGo 800 mobile SDK. Gemalto also supports NFC enabled smart cards.

"Most Canadian Law Enforcement agencies are using Entrust or Gemalto solutions, both of which come from best-in-class providers with great technology and solid client bases." Explains Bowles. "So it made sense to work with both companies rather than to pick one over the other."

Mobile Innovations go-to market strategy also incorporates VMWare Airwatch and the BlackBerry Enterprise Server with GOOD, EMM (Enterprise Mobility Management) servers to manage these mobile devices in the field.

"We are working with the most popular EMM platforms used by Canadian Law Enforcement Agencies." Says Gary Bauer, Mobile Innovations Founder and President. "And by partnering and working with both of these companies, we fit our mobile data security solution to the needs of an expanded law enforcement user base."

Entrust and Gemalto 2-Factor and VMWARE Airwatch and BlackBerry BES EMM solutions will be on display with full live demos throughout the 111th Annual Conference of the Canadian Association of Chiefs of Police (CACP) to be held August 15th and 16th at the Shaw Conference Centre in Ottawa.
