nShield Bring Your Own Key Enables Cloud Customers to Gain Greater Control Over Data Security

Cloud convenience meets security

HIGHLIGHTS

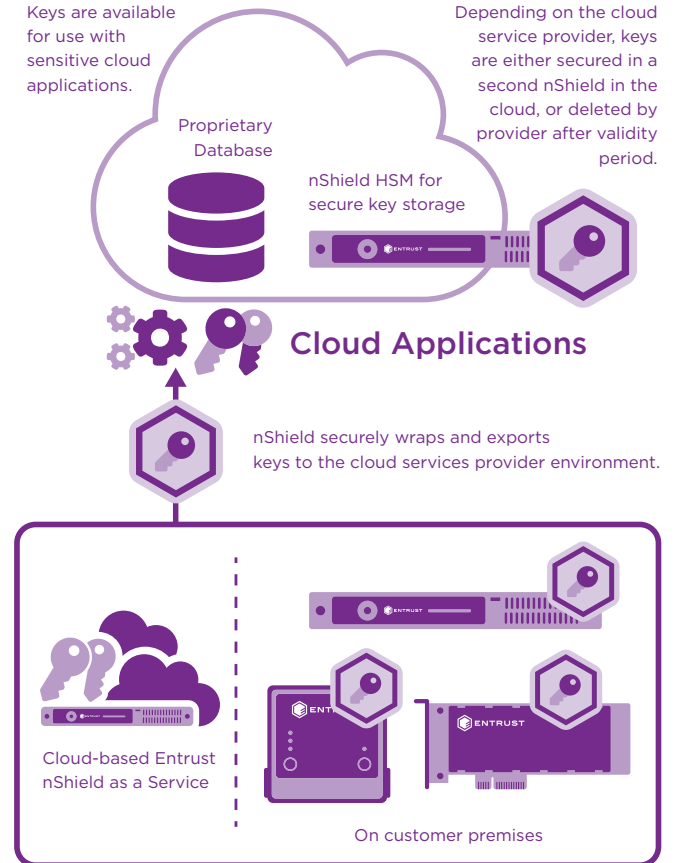

- Safer key management practices that strengthen the security of your sensitive data in the cloud
- Stronger key generation using the Entrust nShield® high-entropy random number generator, which is protected by FIPS-certified hardware
- Greater control over keys – use your own nShield hardware security modules (HSMs) in your own environment to create and securely export your keys to the cloud
- More consistent key management operations, whether your keys are used in the cloud or on premises

With nShield HSMs you can bring your own keys (BYOK) to your cloud applications, whether you're using Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft Azure, or Salesforce.

nShield high-assurance HSMs enable you to continue to benefit from the flexibility and economy of cloud services, while strengthening the security of your key management practices and gaining greater control over your keys.

Keys are available for use with sensitive cloud applications.

Depending on the cloud service provider, keys are either secured in a second nShield in the cloud, or deleted by provider after validity period.

Enabling cloud customers to gain greater control over data security

What nShield BYOK does

With nShield BYOK, you can use your nShield HSMs to generate, store, and manage the keys you count on to secure your sensitive cloud-hosted applications, databases, and bulk storage. nShield BYOK delivers these capabilities:

- **Rely on hardware root of trust.** Your nShield HSMs are highly resilient, FIPS 140-2 Level 3 certified, tamper-resistant devices. These HSMs serve as the root of trust of your cloud services, enabling you to safely generate and secure your encryption and signing keys.
- **Use nShield to manage your keys.** When sensitive data resides in your cloud-hosted applications, you can rely on your nShield HSMs to generate and wrap your keys, and securely deliver them to your cloud applications.
- **Control the availability of your keys.** Because you exclusively control your nShield HSMs, whether on your own premises or in the nShield as a Service environment, you decide when keys are generated and exported. By controlling the master copy, you also control when and whether further exports to your cloud provider occur.
- **Choose your cloud provider.** With nShield BYOK, you decide which cloud provider to use for each key. This gives you the flexibility to choose the right cloud from your on-premises or as a service nShield environments for your different applications, while benefiting from nShield high-assurance key generation and protection.

Getting started with nShield BYOK

To start using nShield BYOK for AWS, GCP, Azure, or Salesforce, you will need an nShield HSM. You can choose from the following solutions:

- nShield Connect, a network-attached appliance
- nShield Solo, a server-embedded PCIe card
- nShield Edge, a USB-connected device
- nShield as a Service, using subscription-based nShield Connect HSMs

You can also purchase nShield Connect, Solo, or Edge HSMs and professional services separately.

To use nShield BYOK with AWS, GCP, or Microsoft Azure using the Microsoft open standards method, you will need the following Entrust package:

Cloud Integration Option Pack

This option pack contains all you need to use your on-premises nShield HSMs to generate, wrap, securely transport, and lease your keys to AWS, GCP, Salesforce, or Microsoft Azure.

You can integrate nShield BYOK with AWS, GCP, Salesforce, or Microsoft Azure yourself, or you can use Entrust Professional Services to help you get connected seamlessly and efficiently.

Bring Your Own Key, Azure Professional Services

This package comprises an nShield Edge HSM, nShield Cloud Integration Option Pack, integration/deployment by the Entrust Professional Services team, and includes one year of maintenance.

Enabling cloud customers to gain greater control over data security

How nShield BYOK works

Entrust provides the mechanisms that let you use your nShield HSMs to generate keys, secure long-term storage, and export your keys into the cloud. Once your keys are exported into the cloud from your on-premises or as a service nShield, you'll manage keys according to one of the following approaches:

If you are using Microsoft Azure...

You will securely transfer your keys to the nShield HSM running within the Azure infrastructure, so you are assured of HSM security at both ends.

If you are using AWS or GCP...

You will lease your keys to AWS or GCP for temporary use in the cloud. After a pre-determined time period, your keys in the cloud will be destroyed. If needed, you can again lease the keys controlled and protected by your on-premises nShield HSMs.

Whichever public cloud service you choose, generating your own key and controlling its export helps you to establish strong safeguards around sensitive data and applications in the cloud.

If you are using Salesforce...

You can use the nShield Cloud Integration Option Pack in conjunction with an nShield HSM to generate, wrap, and securely transport your cryptographic keys to your organization's Salesforce environment.

Entrust HSMs

Entrust nShield HSMs are among the highest-performing, most secure and easy-to-integrate HSM solutions available, facilitating regulatory compliance and delivering the highest levels of data and application security for enterprise, financial, and government organizations. Our unique Security World key management architecture provides strong, granular controls over access and usage of keys.

ABOUT ENTRUST CORPORATION

Entrust keeps the world moving safely by enabling trusted identities, payments, and data protection. Today more than ever, people demand seamless, secure experiences, whether they're crossing borders, making a purchase, accessing e-government services, or logging into corporate networks. Entrust offers an unmatched breadth of digital security and credential issuance solutions at the very heart of all these interactions. With more than 2,500 colleagues, a network of global partners, and customers in over 150 countries, it's no wonder the world's most entrusted organizations trust us.
