

**ENTRUST**

# Remote Digital Signatures for the Workforce

Raise your signing security posture, minimize fraud, and align with the highest signature standards

## OVERVIEW

### Seamless integration within our Verified Signing Solutions portfolio

Entrust's cloud-based remote digital signing service enables your company's employees to authenticate, submit, review, and sign PDF documents using an online portal and a trusted digital certificate. It's all made possible by two products from our verified signing solutions portfolio:

- Entrust Remote Signing Service
- Signhost

Signhost is available via a web portal and a REST API. Both Signhost and Remote Signing Service support the Cloud Signature Consortium (CSC) protocol. The services can be purchased separately for standalone applications.

## KEY FEATURES & BENEFITS

### Simple, anytime, anywhere deployment

Our identity-verification process is available anytime, anywhere to employees. Through the Entrust Remote Signing Service, Entrust will verify the identity of employees and issue them a trusted digital certificate. Employees can then

simply use those credentials to digitally sign PDF documents in the Signhost online e-signature portal.

### A custom, integrated service for a seamless user experience

This digital signing solution is offered as a service, with no private key or secure hardware management required. It can be customized and integrated into your environment for a transparent and unified user experience.

### High assurance signatures

Digital signatures using trusted certificates provide the highest levels of assurance and are perfect for high-risk scenarios and sensitive documents.

### Alignment with compliance standards

Entrust is a publicly trusted certification authority (CA), a member of the Adobe Approved Trust List (AATL), and an EU eIDAS Qualified Trust Service Provider. Digital signatures made with our signing solutions are aligned with the strongest standards and regulations across Europe, North America, and many more regions.

# Remote Digital Signatures for the Workforce

## HOW IT WORKS

Get trusted digital signatures for employees in three easy steps

**1.** Entrust verifies the identity of the employee and that they work for the organization.

**2.** Employee issues their trusted digital certificate and signing key in the Entrust Remote Signing Service.

**3.** Employee can now upload documents to sign using the Signhost web portal or API.

NOTE: For each signature “transaction,” Signhost will connect to the Remote Signing Service and the employee will be asked to authorize the use of their digital certificate and signing key.

## THE ENTRUST ADVANTAGE

### About Signhost

Signhost is our online electronic signature service, designed for high-risk and high assurance scenarios. Signhost enables companies of all sizes and industries to have digital documents signed quickly, easily, and in accordance with multiple regulations.

### About Entrust Remote Signing Service

Entrust Remote Signing Service is a cloud-hosted version of Entrust document signing certificates for employees, with an option for employees to generate eIDAS-qualified signatures.

The service can be integrated into compatible document applications, including Signhost

The solution can be used via our web portal or fully integrated into your own systems through our API. The service hosts data in Europe in compliance with the EU General Data Protection Regulation (GDPR).
