# Chapter 1. Introduction

This document describes the integration of the Hewlett Packard Enterprise (HPE) StoreEver MSL3040/6480 Tape Library (referred to as StoreEver in this guide) with the Entrust KeyControl key management solution using the open standard KMIP protocol. KeyControl serves as a key manager for encryption keys by using various protocols, including KMIP.

## 1.1. Product configurations

Entrust has successfully tested the integration of KeyControl with HPE StoreEver MSL3040/6480 Tape Library in the following configurations:

System	Version
Entrust KeyControl	10.2

## 1.2. Requirements

Before starting the integration process, familiarize yourself with:

- [HPE StoreEver MSL3040 Tape Library User and Service Guide](#)
- [HPE StoreEver MSL6480 Tape Library User and Service Guide](#)
- [Entrust KeyControl Online Documentation Set](#)

# Chapter 2. Deploy and configure KeyControl

## 2.1. Deploy a KeyControl cluster

For the purpose of this integration, a two-node cluster was deployed as follows:

1. Download the KeyControl software from [Entrust TrustedCare](#). This software is available as an OVA or ISO image. This guide deploys an OVA installation.
2. Install KeyControl as described in [KeyControl OVA Installation](#).
3. Configure the first KeyControl node as described in [Configuring the First KeyControl Node \(OVA Install\)](#).
4. Add second KeyControl node to cluster as described in [Adding a New KeyControl Node to an Existing Cluster \(OVA Install\)](#).

Both nodes need access to an NTP server, otherwise the above operation will fail. Sign in to the console to change the default NTP server if required.

Node	Status	Server Name	IP Address
Current Node	Online	KeyControl-1-2023-11-01	10.10.10.100
	Online	KeyControl-2-2023-11-01	10.10.10.101

Name: KeyControl-1-2023-11-01  
Status: Online  
Authenticated: Yes  
Domain: Appliance Management Admin Group  
IP Address: 10.10.10.100  
Certificate: Internal Web server: Default  
External Web server: Default

5. Install the KeyControl license as described in [Managing the KeyControl License](#).

## 2.2. Additional KeyControl cluster configuration

After the KeyControl cluster is deployed, additional system configuration can be

---

done as described in [KeyControl System Configuration](#).

## 2.3. Configure authentication

This guide uses local account authentication.

For AD-managed Security groups, configure the LDAP/AD Authentication Server as described in [Specifying an LDAP/AD Authentication Server](#).

## 2.4. Create DNS record for the KeyControl cluster

This guide uses the individual IP addresses of the KeyControl nodes.

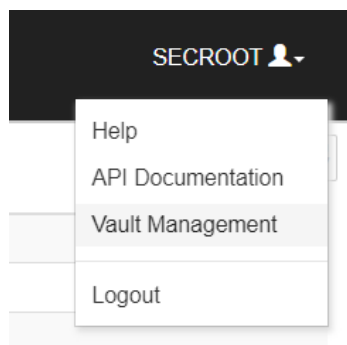

To use hostnames, configure your DNS server giving each node in the KeyControl a unique name.

## 2.5. Create a KMIP Vault in the KeyControl

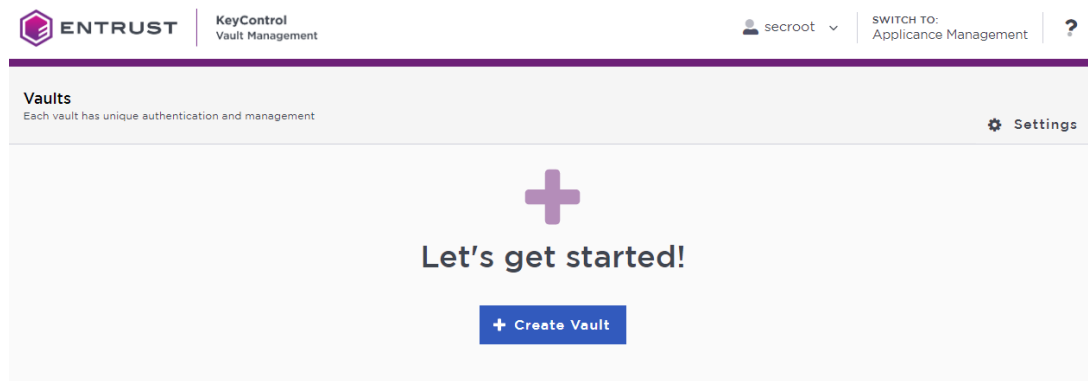

The KeyControl Vault appliance supports different type of vaults. For example: cloud key management, KMIP, PASM, database, and others. This section describes how to create a KMIP vault for tis integration.

Refer to the [Creating a Vault](#) section of the admin guide for more details.

1. Sign in to the KeyControl Vault Server web user interface:
  - a. Use your browser to access the IP address of the server.
  - b. Sign in using the **secretroot** credentials.
2. From the user's dropdown menu, select **Vault Management**.

3. In the KeyControl Vault Management interface, select **Create Vault**.

4. In the **Create Vault** page, select **KMIP**. Then enter your information.

For example:

The screenshot shows the 'Create Vault' form. It includes the following fields and content:

- Create Vault**: A vault will have unique authentication and management.
- Type**: Choose the type of vault to create. The dropdown menu is set to 'KMIP'.
- Name\***: HPE-StoreEver-MSL3040-MSL6480
- Description**: HPE StoreEver MSL3040/6480 integration with Entrust KeyControl. The text is underlined in red. Below the text area, it says 'Max. 300 characters'.
- Administration**: Invite an individual to have complete access and control over this vault. They will be responsible for inviting additional members.
- Admin Name\***: Administrator
- Admin Email\***: Administrator@hpe.com

At the bottom of the form, there are two buttons: 'Create Vault' (blue) and 'Cancel' (grey).

5. Select **Create Vault**, then select **Close**.

A window with the newly created vault information appears. In addition, an

---

email with the same vault information is sent to the security administrator **secroot**.

Example vault information window:

**✓ Vault Successfully Created**

You will need to send the following information to the Vault Admin so they can log into their vault

**Vault URL**  
[Blurred URL]  
 Copy

**User Name**  
Administrator@hpe.com  
 Copy

**Temporary Password**  
[Blurred Password]  
 Copy

**Close**

Example email:

**Administrator, you have been invited to become an administrator of the KMIP vault, CommVault.**

To sign in, use the following:

URL: [Redacted]  
User Name: [Redacted]  
Password: [Redacted]

If you have any issues, [contact support](#).

©2023 Entrust Corporation. All Rights Reserved

6. Bookmark the **Vault URL** listed above.

The newly created Vault is added to the **Vault Management** dashboard.

For example:

7. Sign in to the **Vault URL** with the temporary password. Change the initial password when prompted. Sign in again to verify.

For example:

## KeyControl Vault for KMIP

Sign in to your account

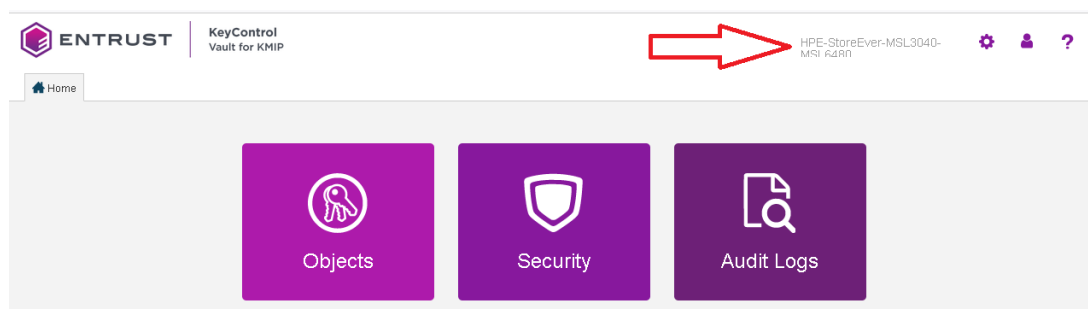

User Name

Password

SIGN IN

8. Notice the new vault.

For example:

## 2.6. View the KMIP Vault details

1. Hover over the Vault and select **View Details**.

For example:

## Vault Details ✕

**HPE-StoreEver-MSL3040-MSL6480**  
HPE StoreEver MSL3040/6480 integration with Entrust KeyControl

## Chapter 3. Integrate KeyControl with StoreEver

Follow these steps to register Entrust KeyControl as a KMS in HPE StoreEver Tape Library.

1. [Obtain the CA certificate](#)
2. [Configure the KMIP server](#)
3. [Create the client certificate bundle](#)
4. [Import tenant client certificate into the StoreEver Tape Library](#)
5. [Set the default encryption mode](#)

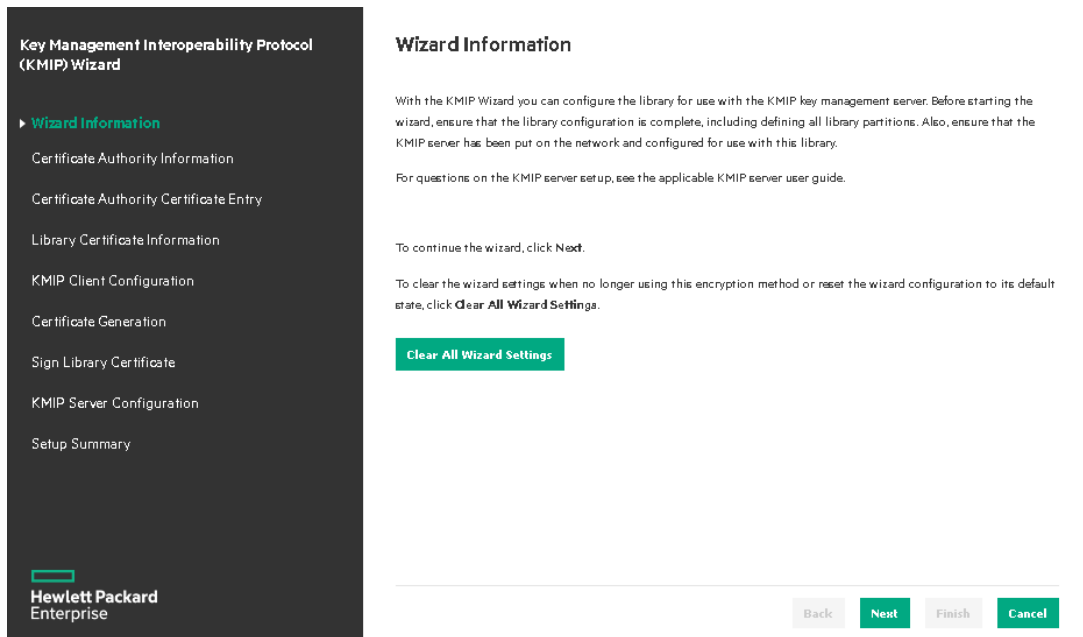

### 3.1. Obtain the CA certificate

The Entrust KeyControl KMIP server can accept a certificate from your local root CA or a trusted CA, or can act as local root CA itself. For the purpose of this integration the Entrust KeyControl KMIP server will act as the local root CA. Execute the following steps to obtain the local root CA certificate for the Entrust KeyControl KMIP server.

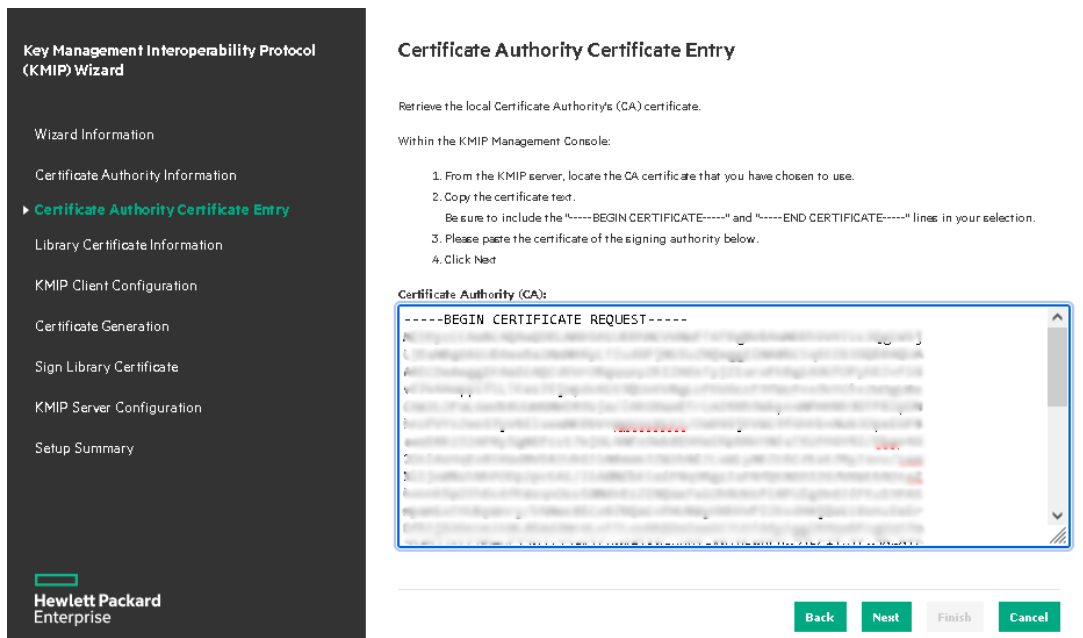

1. Sign in to the KMIP Vault with the URL and credentials from [Create a KMIP Vault in the Entrust KeyControl](#).
2. Go to the **Vault Management** window by selecting **SWITCH TO Manage Vaults / SWITCH TO Appliance Management** in the top right corner of the window.
3. Select the **?** icon in the top right corner of the window, then select **Download CA certificate**.
4. Save the certificate for later use. Example filename: `240614140352_cacert.pem`.

### 3.2. Configure the KMIP server

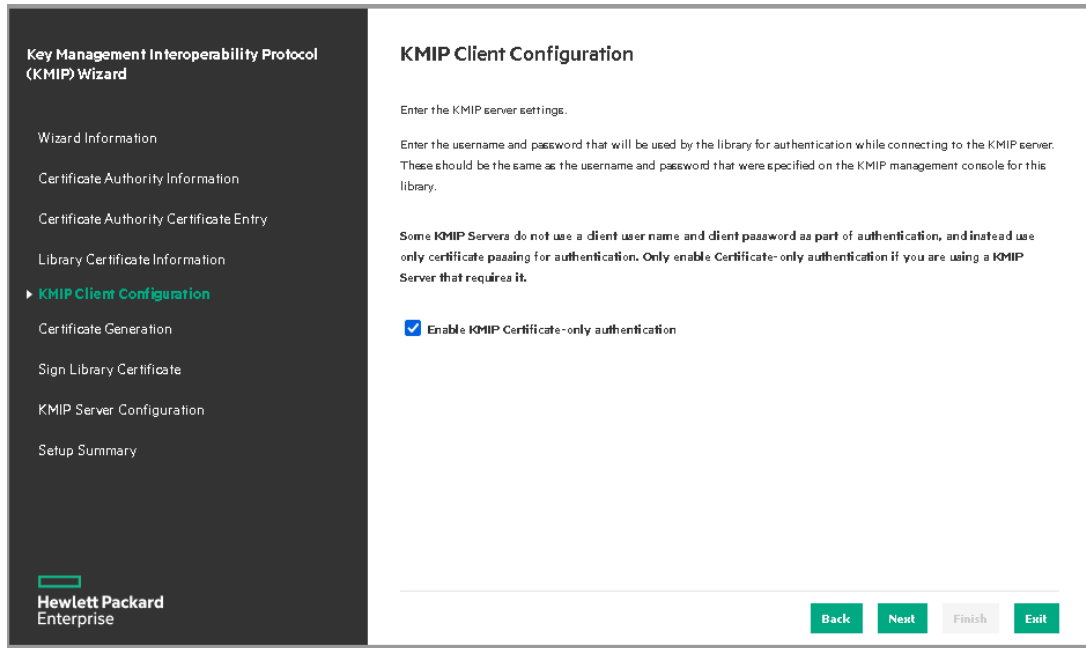

1. Log into the StoreEver webGUI using an account with Security Admin privileges.
2. Select the **Configuration** box.
3. Expand the **Encryption** menu in the right toolbar, then select **KMIP Wizard**.

- 4. Select **Clear All Wizard Settings** to remove any prior configuration.
- 5. Select **Next** twice.
- 6. In the **Certificate Authority Certificate Entry** window, copy-paste the certificate from section [Obtain the CA certificate](#) into the **Certificate Authority (CA):** text box, then select **Next**.

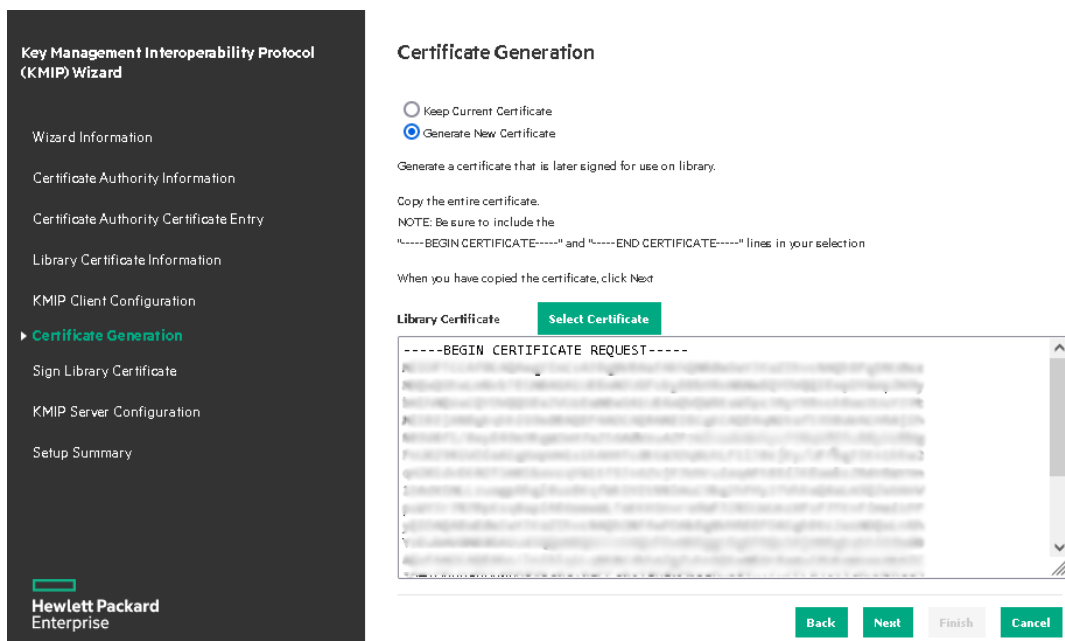

- 7. Select **Next** twice.
- 8. In the **KMIP Client Configuration Window**, check **Enable KMIP Certificate-only authentication**, then select **Next**.

9. In the **Certificate Generation** window, select the **Generate New Certificate** radio button.

10. When certificate request has been generated, copy the certificate request to a file, for example, `hpe-storeever-3040.csr`, then select **Next**.

11. Pause configuring the KMIP server. You will continue further down.

### 3.3. Create the client certificate bundle

1. Sign in to the KMIP Vault with the URL and credentials from section [Create a](#)

[KMIP Vault in the Entrust KeyControl.](#)

- 2. Select **Security**, then **Client Certificates**.

- 3. In the **Manage Client Certificate** page, select the **+** icon on the right to create a new certificate. The **Create Client Certificate** dialog box appears.
- 4. In the **Create Client Certificate** dialog box:
  - a. Enter the **Certificate Name**.
  - b. Select the **Certificate Expiration**.
  - c. Upload the certificate request created in section [Configure the KMIP server](#).
  - d. Select **Create**.

For example:

**Create Client Certificate** [X]

Add Authentication for Certificate

**Certificate Name \***  
HPESStoreEver3040

**Certificate Expiration \***  
Jun 14, 2025

**Certificate Signing Request (CSR)**  
hpe-storeever-3040.csr [Browse]

Encrypt Certificate Bundle

[Cancel] [Create]

The new certificates are added to the **Manage Client Certificate** pane.

ENTRUST | KeyControl Vault for KMIP | HPE-StoreEver-MSL3040-MSI R4R0

Home Client Certificates

**Manage Client Certificate**

Filter [ ] [Download] [+] [ ]

Name	Valid From	Expiration	Generated From External C...	Authentication
<input type="checkbox"/> HPESStoreEver3040	Jun 14, 2024, 1:44:18 PM	Jun 14, 2025, 1:44:17 PM	✔ Yes	Enable

5. Select the certificate and select the **Download** icon to download the certificate.
6. Unzip the downloaded file. It contains the following:
  - A `certname.pem` file that includes both the client certificate and private key. In this example, this file is called `HPESStoreEver3040.pem`.

The client certificate section of the `certname.pem` file includes the lines `-----BEGIN CERTIFICATE-----` and `-----END CERTIFICATE-----` and all text between them.

The private key section of the `certname.pem` file includes the lines `-----BEGIN PRIVATE KEY-----` and `-----END PRIVATE KEY-----` and all text in between them.

- A `cacert.pem` file which is the root certificate for the KMS cluster. It is always named `cacert.pem`.

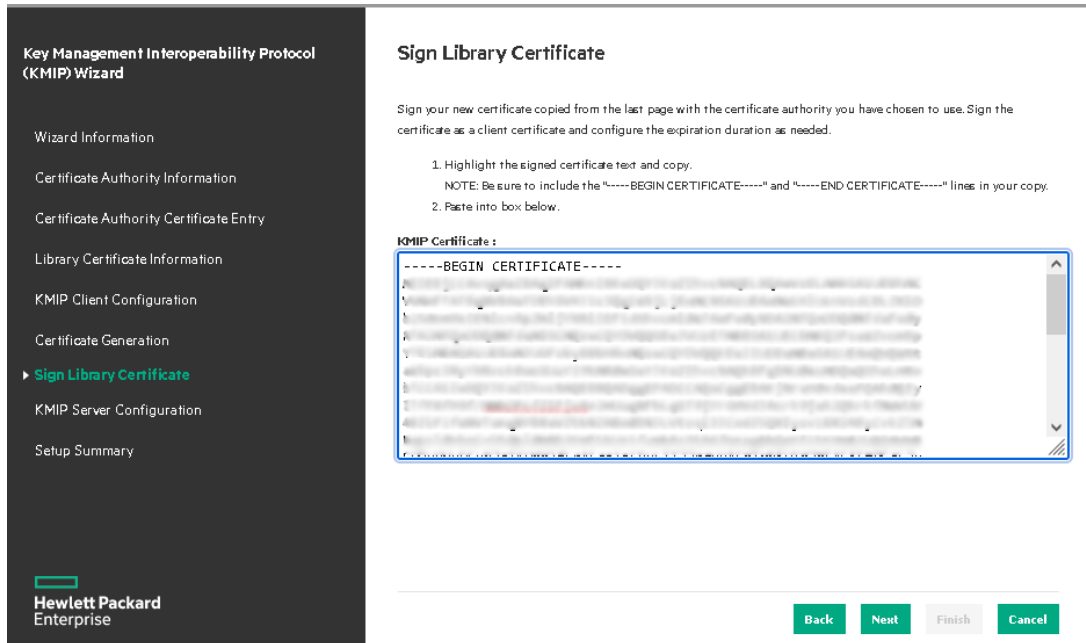

See the following link for additional information [Managing KMIP Objects in the KeyControl KMIP Vault webGUI](#).

## 3.4. Import tenant client certificate into the StoreEver Tape Library

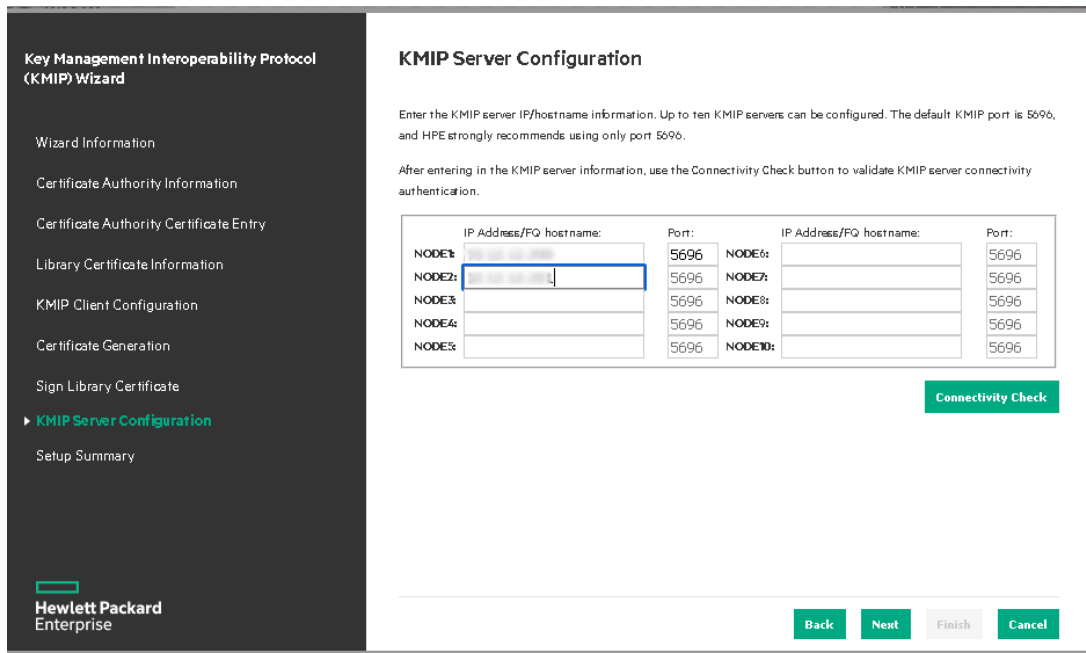

This resumes section [Configure the KMIP server](#).

1. In the **Certificate Generation** window, select the **Keep Current Certificate** radio button this time.
2. In the **Signed Library Certificate**, paste the certificate created in section [Create the client certificate bundle](#), then select **Next**.

File `HPESStoreEver3040.pem` contains the certificate.

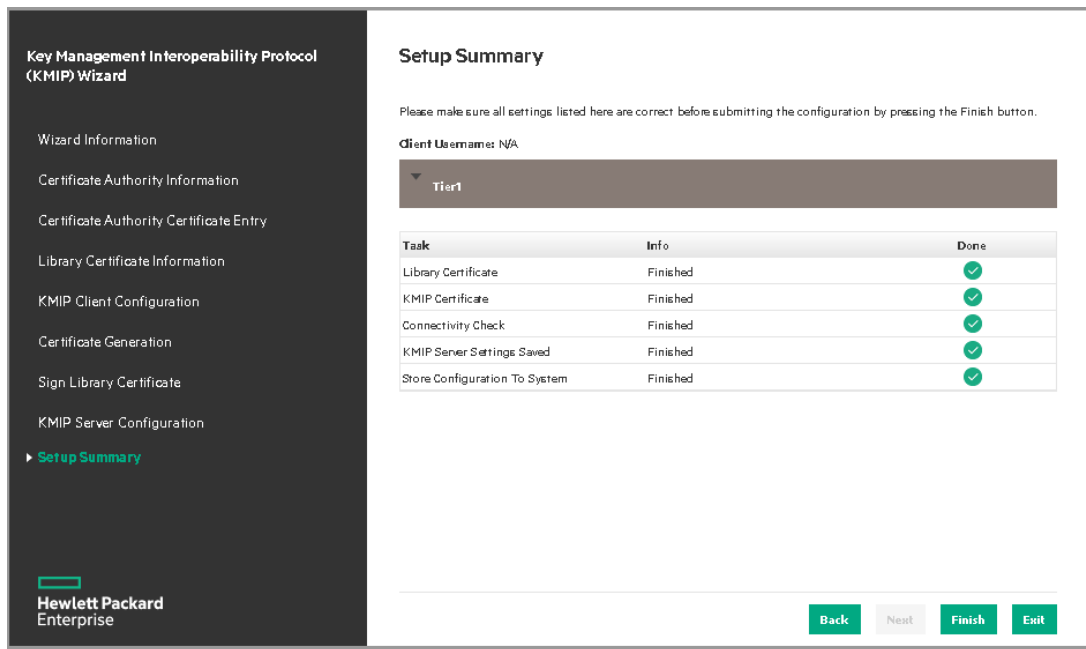

- 3. In the **KMI Server Configuration** window, enter the IP of the Entrust KeyControl KMI server nodes. Select **Connectivity Check** to test connectivity to the nodes, it should check OK, then select **Next**

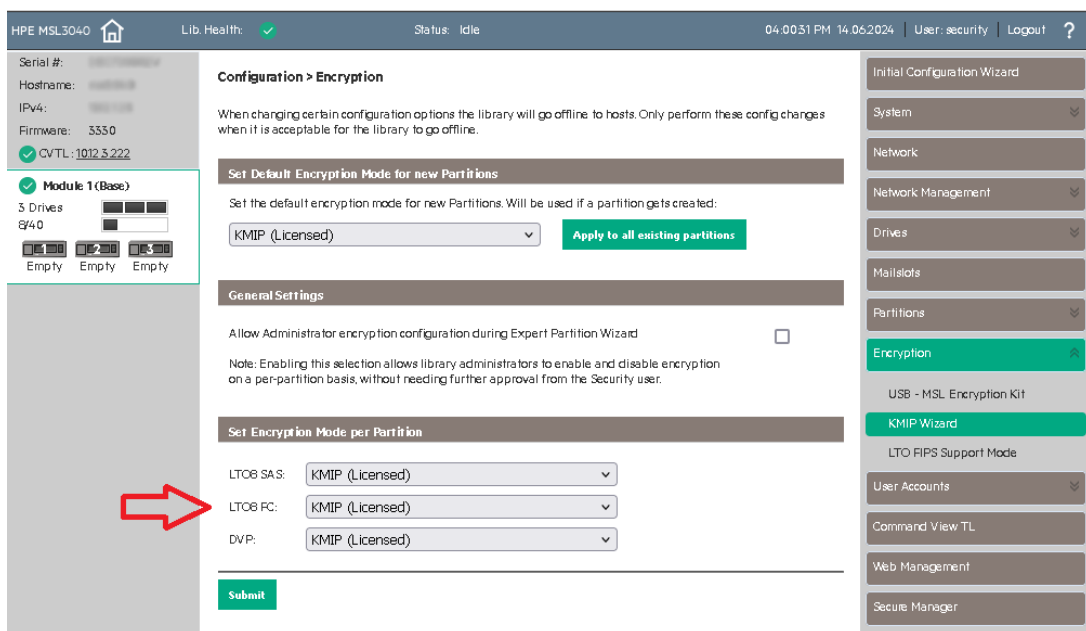

- 4. In the **Setup Summary** windows, select **Finish**, then select **Exit**.

### 3.5. Set the default encryption mode

1. Log into the StoreEver webGUI using an account with Security Admin privileges.
2. In the **Set Default Encryption for new Partitions** section, select **KMIP (Licensed)** from the pull-down menu.
3. Select **Apply to all existing partitions**. Notice the change in **Set Encryption Mode per Partitions**.

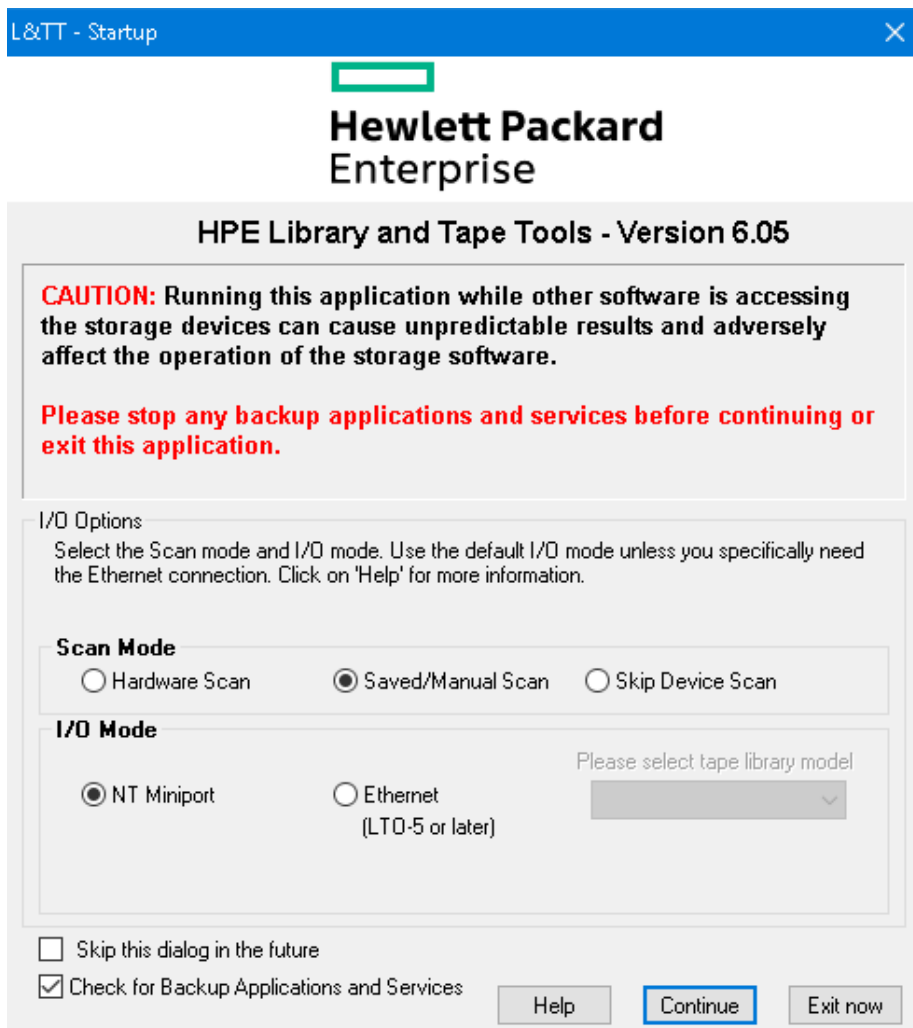

4. Select **Submit**.

## Chapter 4. Test the integration

Testing is done using the [HPE Library and Tape Tools \(L&TT\)](#). Within this tool, the [Drive Performance](#) test writes and reads data to/from the specified tape drive. The Entrust KeyControl KMIP server manages the keys for the writes and reads operations. Therefore, the entire system is tested.

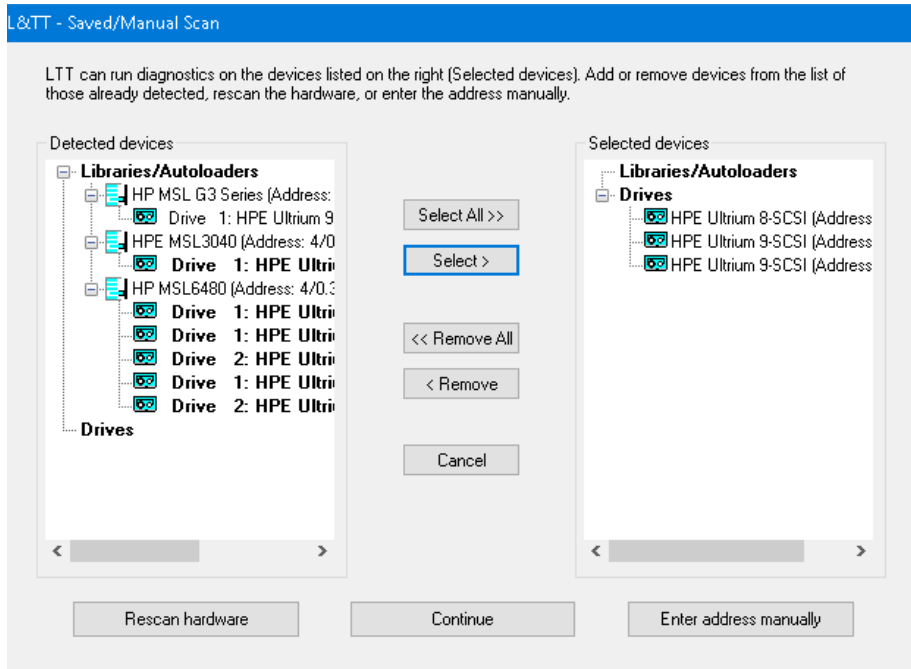

-  This test needs a tape manually loaded in the drive(s).
-  This test will overwrite all data on the tape, meaning that the data will be lost.

1. Launch the **HPE Library and Tape Tools**.
2. In **L&TT - Startup**, select **Saved/Manual Scan, NT Miniport, Check for Backup Applications and Services**, then select **Continue**.

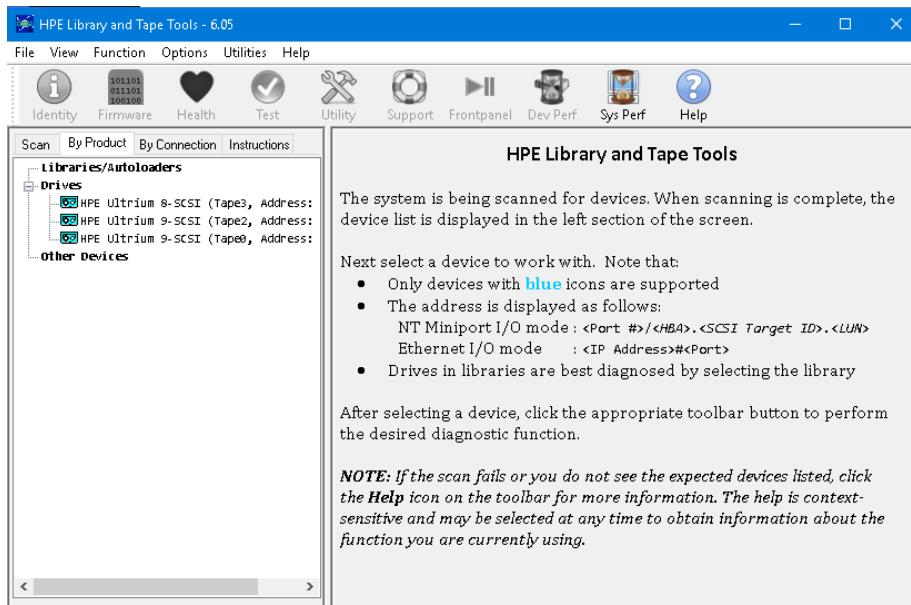

3. All devices available for testing should appear in the **Detected devices** left pane.

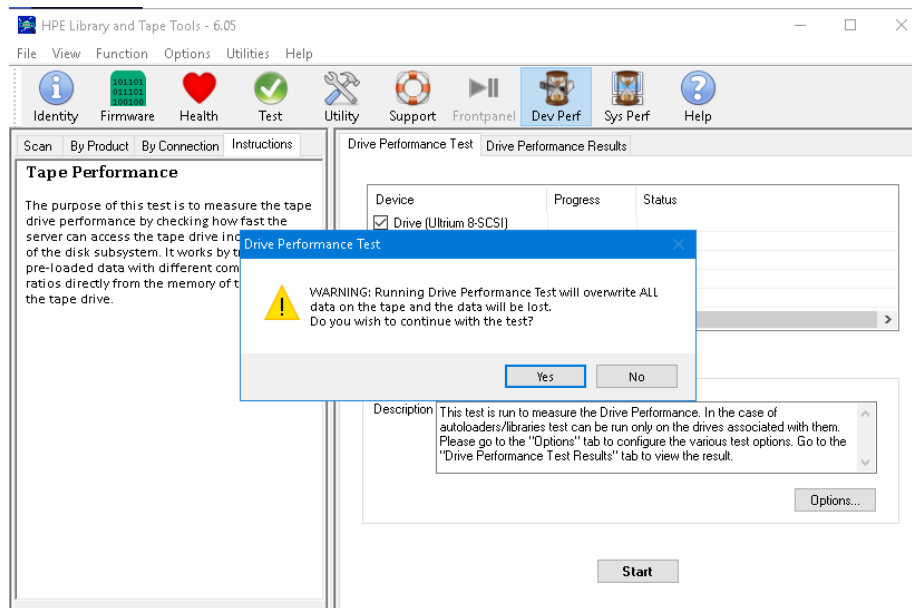

- Expand the device(s) to test in the **Detected devices** pane.
- Select a **Drive** of a device to test, not the actual device itself. Then select **Select**. Repeat until all the drives to test appear in the **Select devices** pane. Then select **Continue**.

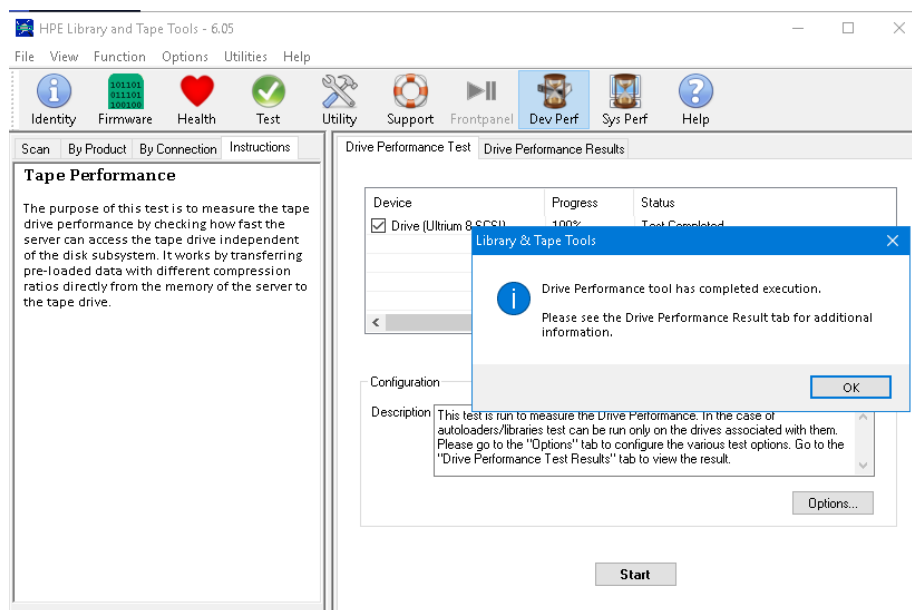

- Wait for the scan to complete. The **By Product** tab in the left pane displays the selected drive(s).

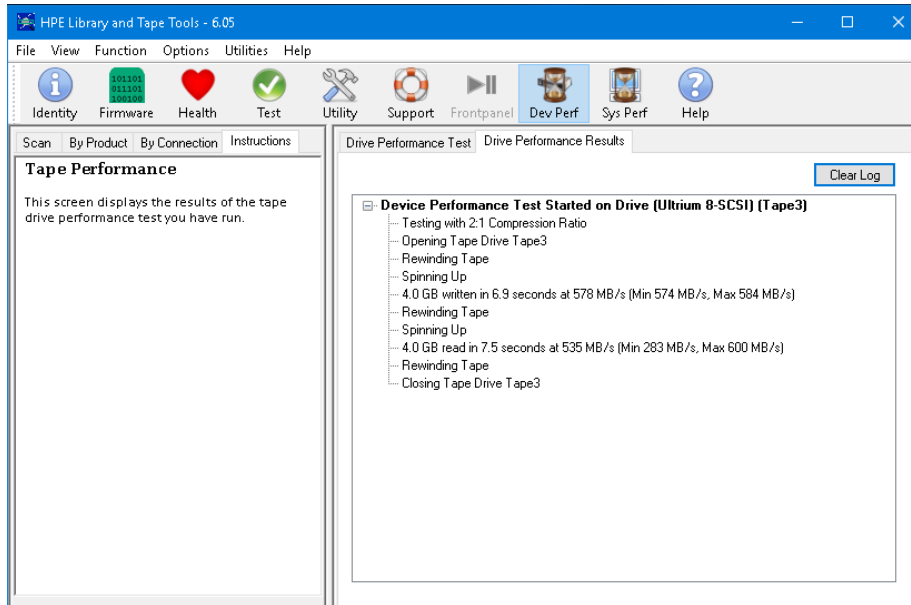

- Select a drive. Then select **DevPerf** in the toolbar. Then select **Start**.

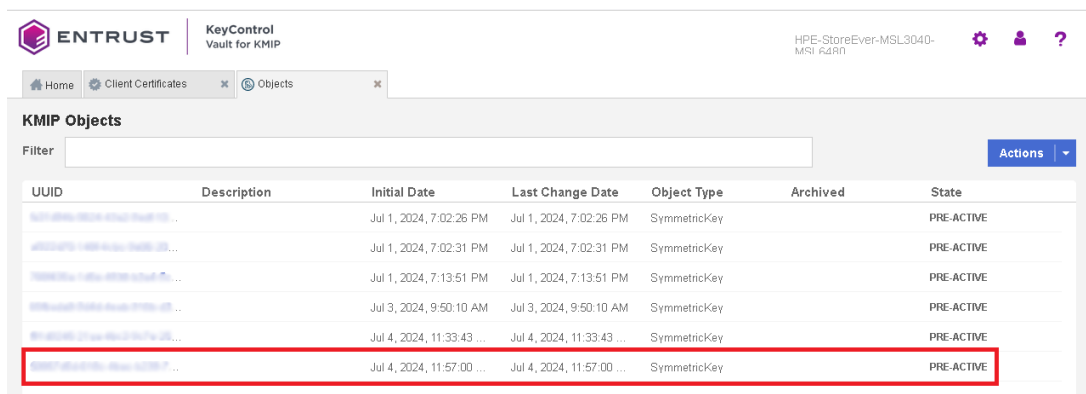

8. Acknowledge the warning. Then wait for the test to complete. Then select **OK**.

9. Select the **Drive Performance Results** tab to view the results.

10. Sign in to the KMIP Vault with the URL and credentials from [Create a KMIP Vault in the Entrust KeyControl](#).
11. Select the **Objects** tab. Notice the symmetric key created during the testing conducted above.

12. Back in the **HPE Library and Tape Tools** window, select the **By Product** tab in the left pane.
13. Repeat steps for additional drives.

The screenshot shows the ENTRUST KeyControl Vault for KMP interface. The top navigation bar includes the ENTRUST logo, 'KeyControl Vault for KMP', and system information 'HPE-StoreEver-MSL3040-MSI 6480'. Below the navigation are tabs for 'Home', 'Client Certificates', and 'Objects'. The main content area is titled 'KMP Objects' and features a filter input field and an 'Actions' dropdown menu. A table lists the objects with the following columns: UUID, Description, Initial Date, Last Change Date, Object Type, Archived, and State. The table contains several rows, with the last three rows highlighted by a red border. These three rows represent SymmetricKey objects created on Jul 4, 2024, with a state of 'PRE-ACTIVE'.

UUID	Description	Initial Date	Last Change Date	Object Type	Archived	State
...	...	Jul 1, 2024, 7:02:26 PM	Jul 1, 2024, 7:02:26 PM	SymmetricKey		PRE-ACTIVE
...	...	Jul 1, 2024, 7:02:31 PM	Jul 1, 2024, 7:02:31 PM	SymmetricKey		PRE-ACTIVE
...	...	Jul 1, 2024, 7:13:51 PM	Jul 1, 2024, 7:13:51 PM	SymmetricKey		PRE-ACTIVE
...	...	Jul 3, 2024, 9:50:10 AM	Jul 3, 2024, 9:50:10 AM	SymmetricKey		PRE-ACTIVE
...	...	Jul 4, 2024, 11:33:43 ...	Jul 4, 2024, 11:33:43 ...	SymmetricKey		PRE-ACTIVE
...	...	Jul 4, 2024, 11:57:00 ...	Jul 4, 2024, 11:57:00 ...	SymmetricKey		PRE-ACTIVE
...	...	Jul 4, 2024, 12:16:01 ...	Jul 4, 2024, 12:16:01 ...	SymmetricKey		PRE-ACTIVE
...	...	Jul 4, 2024, 12:19:06 ...	Jul 4, 2024, 12:19:06 ...	SymmetricKey		PRE-ACTIVE

Notice the three symmetric keys created to test the three drives above.

---

## Chapter 5. Integrating with an HSM

For guidance on integrating the Entrust KeyControl with a Hardware Security Module (HSM), consult with your HSM vendor. If you are using an Entrust nShield HSM, refer to the [Entrust KeyControl nShield HSM Integration Guide](#) available at [Entrust documentation library](#).

## Chapter 6. Additional resources and related products
