

ENTRUST

ENTRUST IDENTITY ENTERPRISE AND CITRIX

Building Strong Alliances for an Integrated Mobile Identity Assurance Solution

Secure your mobile workforce with a derived PIV credential solution

The Problem

Smart cards on mobile devices are incredibly limited

We live in a world that demands anytime, anywhere access. To satisfy these demands in an environment that presents a very broad and dynamic threat landscape, authentication solutions must evolve quickly. As threats, capabilities, and technology continue to evolve, the solutions we turn to for digital trust must protect, but also enable, a drive toward improved business outcomes through streamlined access mechanisms.

Directives like HSPD-12 and FIPS 201 mandate that smart cards (i.e., CAC and PIV) be used for all physical, logical, and network access. Unfortunately, these directives were made before the introduction of mobile devices. As a result, the integration of smart card readers with mobile devices has been largely unsuccessful. These readers are expensive and bulky, and their clunky designs clash with the intuitive design of mobile devices.

In other words, just because it's labeled smart, there is no guarantee that it is smart or will provide a secure, seamless experience.

KEY BENEFITS

- Anytime, anywhere secure access to applications, resources, and information
- Deploy and manage existing and new mobile devices and applications
- Leverage existing smart card/PIV deployment to derive a strong, mobile-based user credential bound to their device
- Pre-integrated with UEM to reduce IT cost and complexity
- Flexible deployment: on-premises or fully-managed cloud service

Entrust and Citrix integrated derived PIV credential solution

The Challenge

Accelerating the adoption of secure technologies

As federal agencies and enterprises continue to go digital, mobile technologies are widely recognized as the primary enabler for optimizing productivity, transforming service delivery and reducing overhead. Mobile-first models are being adopted more and more, making access to sensitive data a very important consideration.

The Federal HSPD-12/FIPS 201-2 Personal Identity Verification (PIV) program mandates smart card authentication to ensure the integrity of both data and the individuals accessing that data. Since government agencies and other industries want to use mobile technologies that protect sensitive data while eliminating the need for passwords and hardware tokens, there is a desperate need for a best-in-class solution.

The Solution

A collaboration of innovators providing real-world, standards-based cybersecurity

Entrust certificate-based, mobile smart credential technology, combined with technology from Citrix, provides secure physical and logical access control to mobile users while minimizing factors and friction.

This integrated derived PIV credential solution establishes secure remote access to your networks and applications via certificate-based authentication. This allows your mobile workforce, remote and branch offices, and remotely connecting partners and clients to safely access your services using their mobile devices – all in a way that is compliant with U.S. Federal HSPD-12/FIPS 201-2 PIV program mandates – and replaces workstation smart card reader access.

Primary use cases

- Mobile authentication, signing, and encryption
 - Native applications and profiles (VPN, secure email, secure browsing)
 - Third-party applications
 - NIST SP 800-157 compliant
- Replace existing smart cards by transforming mobile into a virtual smart card to streamline workstation authentication for:
 - Workstation smart card logon
 - Two-factor authentication for VPN, on-premises, and cloud apps
 - Email encryption and digital signing

Why use Entrust Identity Enterprise and Citrix Endpoint Management?

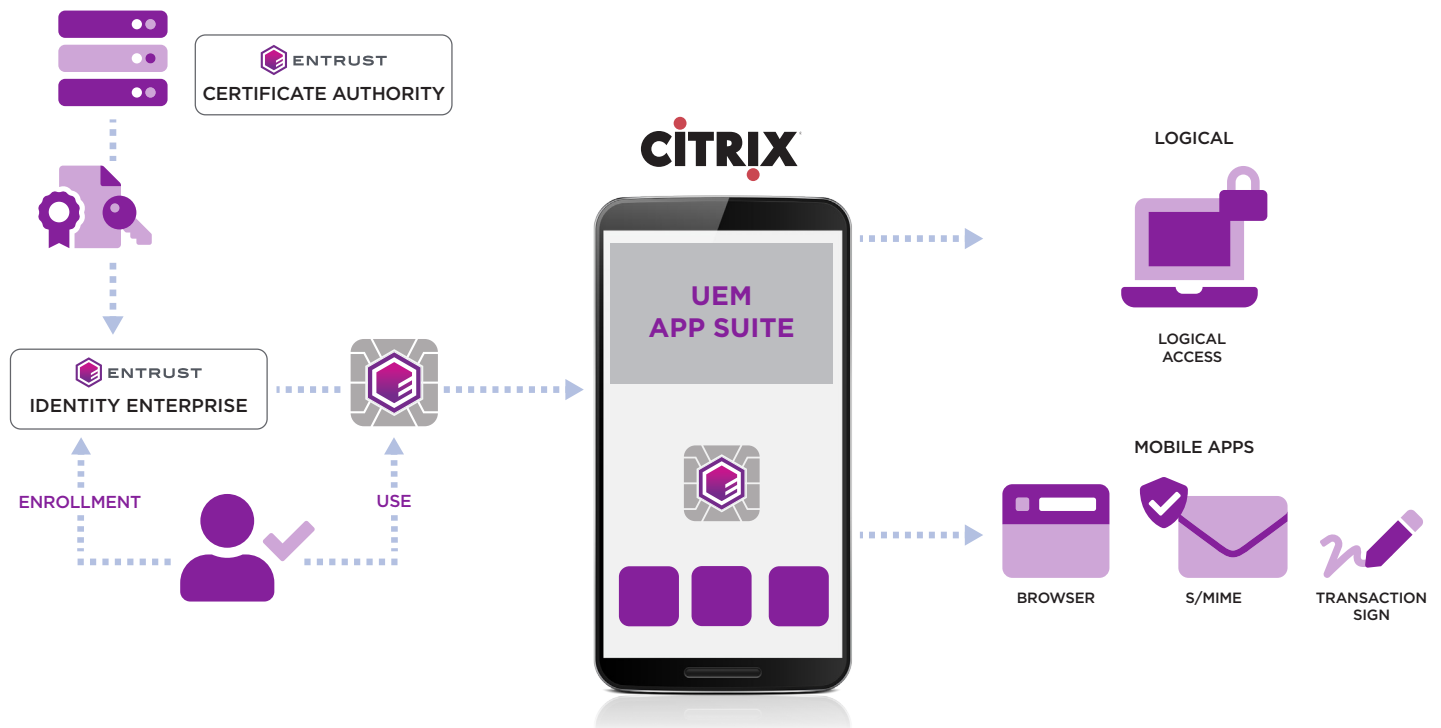

When you provide mobile employees trusted identities to complete secure transactions all through a seamless user experience, you not only maximize valuable resources, you optimize the usefulness of trusted identities. While federal mandates serve as a catalyst for the use of derived credentials, the solution outcome and methodology are directly relevant to any organization moving to more secure forms of authentication.

The Entrust and Citrix integrated derived PIV credential solution allows for seamless and rapid deployment of secure PIV credentials to any managed iOS or Android device and gives employees the ability to authenticate to secured enterprise applications from their mobile device using derived PIV credentials.

The enterprise administrator can leverage the existing Citrix Endpoint Management policy management framework to enable derived, credentials-based authentication for their users and also choose which enterprise applications must be accessed using derived credentials.

Once a device is enrolled via Citrix Endpoint Management, users can use the Citrix Derived Credential Manager app and the Entrust Identity Enterprise Self-Service Module (SSM) to generate the derived credentials on their mobile device. Users authenticate to the SSM using their physical PIV smart cards, which allows them to request their derived mobile credentials post so they can use the Citrix Derived Credential Manager app to create and store the credentials on their mobile device.

FIPS 201-2 COMPLIANT DERIVED PIV CREDENTIALS

About Citrix

Citrix is powering a better way to work with unified workspace, networking, and analytics solutions that help organizations unlock innovation, engage customers, and boost productivity, without sacrificing security. With Citrix, users get a seamless work experience and IT has a unified platform to secure, manage, and monitor diverse technologies in complex cloud environments. Citrix solutions are in use by more than 400,000 organizations including 99 percent of the Fortune 100 and 98 percent of the Fortune 500. For more information, visit [citrix.com](https://www.citrix.com).

ABOUT ENTRUST CORPORATION

Entrust keeps the world moving safely by enabling trusted identities, payments, and data protection. Today more than ever, people demand seamless, secure experiences, whether they're crossing borders, making a purchase, accessing e-government services, or logging into corporate networks. Entrust offers an unmatched breadth of digital security and credential issuance solutions at the very heart of all these interactions. With more than 2,500 colleagues, a network of global partners, and customers in over 150 countries, it's no wonder the world's most entrusted organizations trust us.
