STREAMLINED ENERGY AND CARBON REPORTING (SECR) REPORT

METHODOLOGY:

Emissions were calculated following the GHG Reporting Protocol (Corporate Standard) using the Watershed platform. Energy usage data was collected or estimated based on building square-footage for all facilities, and was combined with emissions factors from the US EPA, Ecoinvent, TCR and other data sources to calculate Greenhouse Gas (GHG) emissions. Electricity emissions factors are chosen based on geography to reflect the emissions intensities of the facilities' local grid.

RESULTS:

The table below sets out energy usage and greenhouse gas emissions by Scope arising from business operations.

ENERGY ACTION STATEMENT:

Entrust is committed to delivering its operational obligations and to reducing its overall carbon footprint. In the period covered by the report, Entrust:

- Received recertification for the ISO 14001:2015 standard at its global headquarters (GHQ), and principal manufacturing facility, in Minnesota, USA.
- Upgraded its electrical infrastructure with a Building Automation System (BAS) at GHQ to improve electrical use tracking and identify emissions saving opportunities.
- Recycled 483 computers through our partnership with PCs for People. 248 of those computers were redistributed to families in need, including 119 children. This resulted

11,949 pounds of e-waste being saved from a landfill and prevented 63.67 mtCO₂e from entering the atmosphere.

In the current year, Entrust is pursuing additional electrical and gas consumption efficiencies with the assistance of a third-party. These efficiencies are projected to reduce electrical consumption by up to 703,360 kWh and gas consumption by up to 12,499 therms. Additionally, we are investigating opportunities to reduce our carbon footprint in the areas of product packaging, logistics, sustainable product designs, and engaging with leased facility and data center managers on clean energy options.
